

Blackmouth Lanternshark, *Etmopterus evansi*

Report Card assessment	Sustainable		
IUCN Red List Australian Assessment	Refer to Global Assessment	IUCN Red List Global Assessment	Least Concern
Assessors	Kyne, P. & Cavanagh, R.		
Report Card Remarks	Small deepwater species with little fishing pressure in Australia		

Summary

The Blackmouth Lanternshark is a small, deepwater species currently known only off northwest Western Australia and the Arafura Sea (Indonesia) on the continental slope.

Further fisheries surveys may indicate a wider distribution. Deepwater trawl fishery expansion in Indonesian waters may place future pressure on the species. However, the Blackmouth Lanternshark is currently unlikely to be captured often as most trawl activity is not within its known depth range. Off northwest Australia, fishing effort is low in its depth range. There is no reason to suspect a decline in range, habitat quality or number of mature individuals. It is therefore assessed as Least Concern (IUCN) and in Australia, Sustainable (SAFS).

Distribution

The Blackmouth Lanternshark is currently known from localised records off northwest Western Australia and from the Arafura Sea, south of the Tanimbar Islands, Indonesia (Last et al. 2002, Last and Stevens 2009).

Stock structure and status

There is currently no information on population size, structure, or trend for the species.

Fisheries

The Commonwealth managed North West Slope Trawl Fishery operates within the species range, but has low fishing effort with a limited number of vessels operating (Marton and Mazur 2014). The Arafura Sea and Indonesian waters may be subject to some trawling effort by Indonesian vessels, however this is currently mostly in less than 200 m depth..

Habitat and biology

The Blackmouth Lanternshark has been recorded from the continental slope at depths of 430 to 550 m (Last et al. 2002). Little else is known of its biology.

Longevity and maximum size	Longevity: unknown Max size: at least 30 cm TL
Age and/or size at maturity (50%)	Males: 26 cm TL Females: unknown
